

UTAH DEPARTMENT OF TRANSPORTATION

PROJECT UPDATE: SPRING 2009

11400 South construction activities will soon be visible from 3600 West to State Street. The project team has been busy preparing for the work. As of early Spring 2009:

- 35% of directly impacted property owners have been contacted by a Right-of-Way representative. The majority of property owners will be contacted by early May, which is right on schedule.
- Final designs are 60% complete, which is also on schedule. Residents can preview roadway designs at Neighborhood Meetings in March and April.
- The project team has communicated with local emergency service providers and school transportation officials to ensure public safety during construction. We've also visited each elementary school in the area to talk with students about work zone safety.

SPRING 2009 CONSTRUCTION SCHEDULE

This spring, traffic lanes will shift to the north from 1300 West to 3600 West while crews work on utilities. Utility work will also continue from 300 West to 700 West with flaggers on hand as needed. The long-term (200-day) closure for 300 West to 700 West is expected to start this summer. More information will be communicated as soon as it is available.

Major I-15 work will begin in late spring. Although northbound lanes will shift east, no major lane closures are expected, especially during peak hours of traffic. Short-term and/or overnight closures may be necessary due to some activities related to I-15 bridge construction. Exceptions will be posted in advance.

Major work from 700 West to 1300 West and from State Street to 300 West is not expected to begin until late summer or early fall.

All work listed above should take place within existing construction easements. If you have a concern about the location of a work activity, please notify the project team immediately at (801) 696-4865.

WHAT TO EXPECT DURING CONSTRUCTION

The best way to stay informed is to join the project email list by emailing 11400south@utah.gov. Advance notice of construction activities is also posted on electronic roadway signs and the project website, www.udot.utah.gov/11400south. The project team may also deliver fliers or initiate direct contact with residents as needed. See reverse for an overview of plans to minimize construction impacts on the public. If we come upon an exception, we'll communicate changes as soon as possible.

CONSTRUCTION IMPACTS

Changes in access	Generally we'll only close one-half of driveways/side street accesses at a time.
Parking	On-street parking may be limited while we're working directly in front of a home/business.
Snow and garbage removal	Snow removal should continue as normal. Depending on conditions, residents may need to pull garbage cans out to the edge of traffic lanes in service. We'll notify waste removal companies of project conditions.
Mail delivery	A&W will meet with USPS representatives and plan for continued service.
Utility impacts	Work will require periodic short-term (1-2 hr.) shut-offs for tie-ins. Whenever possible, we'll provide advance notice of interruptions.
Noise & dust	Reasonable amounts of noise and dust are natural byproducts of construction and should be expected. A water truck and sweeper are available to address dust as needed.

FREQUENTLY ASKED QUESTIONS & COMMENTS

Q I haven't been contacted by a Right-of-Way representative yet. What's going to happen to my property?

A The majority of property owners will be contacted by early May.

Q What is the plan for emergency access near 700 West during the 200-day closure of 11400 South?

A Emergency service providers in the area frequently work together to provide the quickest response possible given the situation. The project team has coordinated with these entities to develop a special access road and response system for use during the project.

Q What is going to happen to my irrigation line during construction?

A We're working with irrigation companies to ensure continued access to irrigation water during construction. Residents will receive advance notice if a temporary interruption is required.

Q What is going on with median placement?

A Based on public input, 75% of raised medians have been removed from final designs. UDOT will place some medians along the project route to improve safety and efficiency, and calm traffic flow.

PLEASE CONTACT US WITH YOUR QUESTIONS OR CONCERNS:

We appreciate the opportunity to help find answers and resolve issues. Call (801) 696-4865, email 11400south@utah.gov or leave a comment on the project website at www.udot.utah.gov/11400south.

JOIN OUR EMAIL LIST FOR 11400 SOUTH PROJECT UPDATES:

We'll email you the latest project news, such as expected traffic impacts, upcoming events and project milestones. Project updates are sent weekly or on an as-needed basis. Email 11400south@utah.gov to join the list.

GET READY

11400 South closes from 300 West to 700 West this summer. The closure will last for approximately 200 days. More information is forthcoming.

Estimated project completion is Fall 2010
